Subject name: Advanced Database Management Systems

Report

Undoubtedly it was a great experience in creating projects. It was a big task for us to develop a project that would not only get a good mark in the subject, but also have great potential in the future. We tried to devote more energy to the functionality and collection of information, as well as to a good user experience, everything is simple and clear. We used all of our knowledge, but also we had problems.

Despite the fact that the project was large enough, we did not have big problems. But it should be noted that the most hindering factor was that each team member works and climbs the career ladder. It was difficult for us to get together as everyone had their own things to do. Since everyone was working, we did not have time to do everything that we planned. We would also like to note why you chose Oracle, since all the last semesters we practiced Oracle. Also Django in order to increase productivity and gain time, since Django makes it possible to quickly write projects But now we are proud to be on the home stretch all together.

So on the other hand we had problems with our data. As it may seem that collecting data is easy, but since we were doing an online pharmacy, it was a big responsibility to collect the correct data in order for our project to look more and more like a real one.

In conclusion, we want to mention that it was really challenging to complete everything on time despite the complications, but the course and working on a project with a team left us an irreplaceable experience.
